WORK EXPERIENCE

Dexter Axle

Jun 2026 — Aug 2026

Information Technology Intern, Ignition Developer Intern

On-Site, Albion, Indiana, USA

- Architected a plant-wide asset map application in Ignition Designer to assist in the location, tracking, and organization of 300+ multi-department assets across 7 buildings on site.
- Scaffolded a normalized database in Microsoft SQL Server, writing stored procedures and application interactions to streamline data interactions with the asset map application.
- Worked with networking engineers and external contractors to handle the registration and deployment of 30+ new wireless access points (WAPs), boosting security and efficiency compliance by 40%
- Assisted office staff with technology-related issues, handling hundreds of tickets across all buildings and departments on campus.

Grace Church

Jan 2026 — Jun 2026

Web Developer

Hybrid, Michigan, USA

- Designed, built, and shipped a responsive website built with WordPress, Advanced Custom Fields, Bricks Builder, and code components comprised of HTML, JavaScript, CSS, and PHP.
- Managed 301 redirects and SEO optimization for clean transition from the previous website, programmatically migrated site content, and cleanly transitioned site domain from the old DNS provider to Cloudflare DNS.
- Worked with external service providers including Subsplash to dynamically host, synchronize, and distribute content across web and mobile applications via API/embedded content.
- Optimized site performance using CDN caching, image compression optimization, and JavaScript load minimization.

Martinrea Industries

May 2025 — Aug 2025

Information Technology Intern

On-Site, Michigan, USA

- Collaborated with IT analysts on domain migration of 120+ machine operator kiosks while developing and maintaining detailed documentation, reducing network overhead by uniting systems under one corporate policy
- Created a robust and easy-to-use PA system for meetings, increasing audibility for listeners farthest from the speaker by more than 30% and resulting in improved team cohesion and communication.
- Monitored and resolved various operator issues and system malfunctions, reducing machine downtime and increasing productivity through quick response times and troubleshooting endeavors.
